DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 9-13, drawn to drawn to a recombinant expression cassette and a recombinant plant cell, classified in class 435, subclass 320.1, for example.
- II. Claim 5 and 14-17, drawn to an isolated 3' termination sequence, classified in class 536, subclass 24.1, for example.
- III. Claim 6, drawn to a method for isolating a recombinant protein, classified in class435, subclass 70.1, for example.
- IV. Claim 7, drawn to a method of identifying non-plant 3' termination sequences that are functional in plants, classified in class 435, subclass 91.4, for example.
- V. Claim 8, drawn to a method for making a transgenic plant, classified in class 800, subclass 278, for example.

For inventions I and II above, restriction to a single nucleic acid sequence is also required under 35 USC 121. Therefore, if invention I or II is elected, a single nucleic acid sequence must <u>also</u> be elected.

Applicants are reminded that polynucleotides having different nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to

Art Unit: 1638

represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq. This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of a single genus of invention, but constitutes an independent and patentably distinct invention.

The inventions are distinct, each from the other because of the following reasons:

Invention I and inventions II-V are distinct inventions. The recombinant expression cassette and recombinant plant cell of invention I are classified separately from, and differ in structure, function and use from, the isolated 3' termination sequence of invention II. The recombinant expression cassette and recombinant plant cell of invention I are classified separately from, and are not utilized to practice or produced by, the methods of inventions III-V.

Invention II and inventions III-V are distinct inventions. The isolated 3' termination sequence of invention II is classified separately from, and is not utilized to practice or produced by, the methods of inventions III-V.

Invention III and inventions IV-V are distinct inventions. The method for isolating a recombinant protein of invention III is classified separately from, utilizes different materials and method steps than, and produces a different end result than, the methods of inventions IV-V.

Invention IV and invention V are distinct inventions. The method of identifying non-plant 3' termination sequences of invention IV is classified separately from, utilizes different materials and method steps than, and produces a different end result than, the method of invention V.

Art Unit: 1638

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cynthia Collins whose telephone number is (571) 272-0794. The examiner can normally be reached on Monday-Friday 8:45 AM -5:15 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones can be reached on (571) 272-0745. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
